<b>Application:</b>	API Valves are used for bottom loading and unloading of petroleum tankers. Valve nose shape and opening comply with American Petroleum Institute standard (API RP-1004) enabling Dixon™'s API valves to interchange with competitor items made to the same specification. Three styles are available; a load model without handle, a load/unload model with a pull up to operate handle to allow manual opening and a load/unload model with a pull down to operate handle to allow manual opening.
<b>Design:</b>	Load/unload versions feature an ergonomically curved handle that opens with a short 62" stroke. Available with a fixed or removable handle. Maintenance is simplified as it can be completely rebuilt without removing valve from the tank. ALH (Anodised Aluminium Hard Coat) nose ring can be rotated to provide fresh cam service. Ergonomic handle.
<b>Seal:</b>	Chemical resistant crank seals & poppet seal (PTFE seals optional)
<b>Service:</b>	5204 Series approved for use in the following service: gasoline, diesel, E10 10% ethanol, E85 85% ethanol E100 100% ethanol, B15 15% bio-diesel/diesel, B20 20% bio-diesel/diesel. 5204 Series tested performance to -40°F with 100% ethanol, B15 15% bio-diesel & B20 20% bio-diesel. 5204 Series approved for use in the following service: B100 100% bio diesel
<b>Material:</b>	Aluminium, anodised hard coat aluminium
